PROFESSIONAL SUMMARY

Frontend Engineer with 4 years building and owning production web applications at scale using **React**, **Angular**, and **TypeScript**. Proven ability to lead frontend architecture, establish coding standards, and deliver measurable results — **88% faster load times**, **40–60% fewer production bugs**, and a reusable component library that cut delivery time by 25%. Experienced working in cross-functional teams with international stakeholders, with additional full-stack capability in **Java/Spring Boot** for end-to-end ownership.

TECHNICAL SKILLS

Frontend: React, Angular, TypeScript, JavaScript (ES2022+), HTML5, CSS3, SCSS

State Management: Redux, Redux Thunk, Redux Toolkit, NgRx

UI Libraries: Material UI (MUI), Ant Design, Tailwind CSS, Bootstrap

Backend: Java 23, Spring Boot, RESTful API Design

Database: MySQL, ClickHouse

Code Quality: ESLint, Storybook

Tools & Workflow: Git, Agile/SCRUM, React DevTools, Lighthouse, Docker

Integrations: WebSocket, Axios, i18n, Formik, React Router

WORK EXPERIENCE

Frontend Engineer

May 2022 – Present

PALTECH Company Limited - ISO-certified software outsourcing company, specializing in high-volume web platforms and enterprise Java solutions for international SME clients (Vietnam & Taiwan)

- Engineered a frontend performance overhaul that reduced client-side load time from 3 minutes to about 20 seconds (88% improvement) through code refactoring, query optimization, and advanced data caching strategies.
- Designed and implemented a scalable UI component library using Storybook, cutting feature delivery time from 4 weeks to ≤3 weeks (25%+ faster) and reducing cross-team integration friction.
- Reduced production bugs by 40–60% per release by establishing ESLint coding standards, structured code review processes, and close QA collaboration.
- Diagnosed and eliminated recurring Out-of-Memory (OOM) incidents in production, improving system uptime and reliability across 3 enterprise web applications.
- Developed and maintained RESTful APIs (Java 23 / Spring Boot) to support real-time data visualization dashboards and BOT analytics reporting.
- Mentored 2 junior developers through onboarding, technical training sessions, and code reviews, directly improving team code quality and delivery standards.

KEY PROJECTS

IntelliFend – Bot Management Platform

January 2025 – Present

Frontend Engineer

Team: 10 engineers

Stack: Angular17, NgRx, Java 23, Spring Boot, ClickHouse, MySQL

- Led end-to-end frontend development of WAF Report, Bot Tester Report, and Bot Analytics dashboards—owning architecture, data visualization, and API integration.
- Built and maintained 3 separate back-office portals (User, Admin, Dev) with role-based access control and responsive design across all device sizes.
- Proactively resolved 10+ long-standing legacy bugs, improving system stability and significantly reducing escalations to backend team.
- Monitored production alerts and resolved backend OOM incidents with zero SLA breaches throughout the project.

MultiCloud – Multi-Cloud Service Platform

Oct 2022 – Dec 2024

Frontend Engineer

Team: 15 engineers

Stack: React, Redux Thunk, MUI, SCSS, Axios, WebSocket, Formik, i18n

- Developed and maintained 3 production web portals (Admin, Agent, Customer) serving users across multiple cloud environments in collaboration with cross-functional Taiwan-based team.
- Improved cross-browser compatibility from 50% to 90% by implementing systematic compatibility testing and polyfills.
- Established frontend coding standards and reusable component guidelines, reducing code duplication by an estimated 30%.
- Implemented real-time data updates using WebSocket integration and asynchronous API patterns.

Merito System – Internal Reporting Platform

May 2022 – Sep 2022

Frontend Engineer

Team: 20–30 engineers

Stack: Angular 11, Bootstrap, Java

- Delivered 2 data-intensive reporting pages within tight project timelines as part of a large cross-functional engineering team.
- Resolved backend bugs in Java services and integrated with asynchronous APIs to ensure accurate, real-time report rendering.

EDUCATION

B.Sc. Mathematics & Computer Science

2018 – 2022

Ho Chi Minh City University of Science (HCMUS)

GPA: 7.67/10 | Faculty of Mathematics & Computer Science
